

Partner Review Question Set

This smaller question packet is intended for institute feedback on the public-facing SSL chatbot. The goal is to confirm whether these are realistic and important questions for external users and collaborators.

What We Are Hoping To Confirm

Please let us know whether these questions feel realistic for public users, which ones are most important for SSL, and whether any important public-facing topics are missing.

Review Questions

Q01

What is the Sustainable Solutions Lab, and what does it focus on?

Why included: Core public-facing overview question that checks whether the chatbot represents SSL's mission accurately.

Q02

What does the report *Who Counts in Climate Resilience?* identify as the two transient populations it focuses on?

Why included: Checks whether the system captures a major SSL report accurately and concisely.

Q03

How are *Voices that Matter* and *Views that Matter* different in the kind of evidence or perspective they provide?

Why included: Checks whether the chatbot distinguishes related SSL reports instead of conflating them.

Q04

What concerns does the East Boston resilience work raise about climate adaptation, gentrification, and displacement?

Why included: Representative place-based question tied to climate justice and equity framing.

Q05

What does the SSL report say about the Massachusetts Municipal Vulnerability Preparedness (MVP) Program in the Greater Boston region?

Why included: Good test of whether the chatbot can describe a major SSL program or report for external users.

Q06

What has SSL done about climate resilience in Boston?

Why included: Important broad user question that tests whether the answer feels useful rather than overly extractive.

Q07

Who is the current director of the Sustainable Solutions Lab?

Why included: Straightforward public-facing people question that should be answered cleanly.

Q08

How does SSL publicly describe its climate justice framing?

Why included: High-value framing question that tests whether the system preserves SSL's public language and priorities.

Q09

What kinds of public materials are available through the SSL ScholarWorks collection?

Why included: Checks publication-discovery value for external users looking for reports or research outputs.

Q10

What projects or initiatives are highlighted on the SSL projects page?

Why included: Useful for checking whether project and page discovery is accurate and helpful.

Q11

What phone number is listed for SSL on the public website?

Why included: Simple contact lookup question that is easy for a partner reviewer to validate quickly.

Q12

What health or air-quality concerns appear in *Community-Led Climate Preparedness and Resilience in Boston*?

Why included: Representative report-specific factual question tied to community impacts.

Q13

According to *Voices that Matter*, what preparedness concerns do Boston-area residents of color discuss?

Why included: Good check on whether the answer captures community voice rather than only abstract policy language.

Q14

How does the financing report organize resilience funding across different scales?

Why included: Useful synthesis-style policy question that should still remain understandable to a non-specialist.

Q15

According to the MVP report, what does the Massachusetts Municipal Vulnerability Preparedness Program help municipalities do?

Why included: Clear, stakeholder-friendly program question that should reveal whether answers are plain-language enough.

Q16

Why are transient populations often overlooked in climate resilience planning according to *Who Counts in Climate Resilience*?

Why included: Checks whether the chatbot can explain the meaning of a report, not just restate report facts.

Q17

What does *Connecting for Equitable Climate Adaptation* contribute to understanding Metro Boston climate adaptation stakeholders?

Why included: Good test of whether the system can explain a more conceptual stakeholder-mapping contribution clearly.

Q18

What is SSL's current annual budget?

Why included: Important refusal example that lets the partner judge whether unsupported answers are handled safely and clearly.

Suggested Feedback Prompts

- Are these realistic questions that public users or collaborators would actually ask?
- Which of these questions feel most important for SSL to answer well?
- Are any of these questions misleading, too technical, or missing important public-facing topics?
- Does the unsupported-question example feel appropriate for a public-facing assistant?
